

Reachin Think Tank

Reachin Technologies is proud to announce our new Reachin Think Tank concept, which aims to provide talented students the opportunity to investigate new technologies and concepts within haptics, graphics and audio.

The Reachin Think Tank program will commence beginning of summer 2006 and primarily targets final year students studying for the title Master of Science in Engineering, Degree Program in Computer Science and Engineering.

For the 2006 Think Tank program we have allocated three available positions for highly motivated individuals who want to work with R&D development within the field of haptics, graphics and audio. In general, students interested in games development, 3D graphics programming, or robotics are guaranteed to find the Think Tank project very interesting and valuable for their future career.

Applicants to the Think Tank initiative should expect to work full time for about 10 - 12 weeks, participating in a solid hands-on project with well defined deliverables. All work will be done on site at Reachin's offices in Stockholm, Sweden.
