

The ESRF is a multinational research institute, situated in Grenoble, France and financed by 18 countries mostly European. It operates a powerful synchrotron X-ray source with some 30 beamlines (instruments) covering a wide range of scientific research in fields such as biology and medicine, chemistry, earth and environmental sciences, materials and surface science, and physics. Research at the ESRF is carried out by several thousand external users each year from universities, public research laboratories and industry, and by the ESRF's own scientists. The ESRF employs about 560 staff and is organized as a French *société civile*. The working language of the ESRF is English.

We have openings for research, technical and administrative staff regularly throughout the year. Information can be found on our web site at <http://www.esrf.fr>
